Product Details

- Arthouse Design for the Petzval Look
- Use from Macro to Infinity with Excellent Sharpness over Depth of Field
- Ideal for Cinema Production and Creative Photographic Applications
- [MikroMak™ Prime Probe Lenses](#) Also Available

MikroMak™ PetzVex™ Prime Probe Lenses, part of Infinity Photo-Optical Company's line of Nelsonian™ Optics, produce the Petzval Arthouse look of soft image edges with sharpness over great depth in the center of the image, drawing attention to the subject. Like other members of the [MikroMak™ Prime Probe family](#), when set to infinity, everything up to a close proximity of the lens is automatically in focus. The knurled focus ring can then be used to adjust the focus of the lens to the micro or macro range, indicated by magnification markings on the lens body. MikroMak™ Prime PetzVex™ Prime Probe Lenses provide the flexibility required for creative story telling in photography and cinema production applications while providing the high performance required for industrial and laboratory settings.

PetzVex™ models are available in 40mm and 50mm designs. A suite of accessories including adapters to C-Mount, L-Mount, and Sony mounts, mounting solutions, and spacers are available; see each specific accessory for more information.
