General

Polarization Rotator **Type:**

Physical & Mechanical Properties

>18.0 **Clear Aperture CA (mm):**

25.40 **Diameter (mm):**

Length (mm):

25.40

Construction:

Crystalline

Parallelism (arcsec):

<10

Width (mm):

8.00

Rotational Accuracy:

<5 arcmin

Substrate Thickness (mm):

3.33

Optical Properties

Coating:

R_{avg} <0.2% per surface

Design Wavelength DWL (nm):

532

Substrate:

Crystalline Quartz

Surface Quality:

20-10

Transmitted Wavefront, P-V:

λ/8 @ 633nm

Damage Threshold, By Design:

>10 J/cm² @ 10ns

Polarization Rotation:

90° (clockwise)

Threading & Mounting

Mount Thickness (mm):

8.0

Mount:

Black Anodized Aluminum

Regulatory Compliance

RoHS 2015:

[Compliant](#)

Certificate of Conformance:

Need different specs or modifications?

Edmund Optics offers comprehensive custom manufacturing services for optical and imaging components tailored to your specific application requirements. Whether in the prototyping phase or preparing for full-scale production, we provide flexible solutions to meet your needs. Our experienced engineers are here to assist—from concept to completion.

Our capabilities include:

- Custom dimensions, materials, coatings, and more
- High-precision surface quality and flatness
- Tight tolerances and complex geometries
- Scalable production—from prototype to volume

Learn more about our [custom manufacturing capabilities](#) or submit an inquiry [here](#).

Product Details

- Rotates Polarization by a Fixed Angle Regardless of Incident Polarization Angle
- Convenient Replacement of Half-Waveplate for Narrow Waveband Lasers
- 1064nm, 532nm, and 355nm Anti-Reflection Coatings Available in Both 45° and 90° Rotation Angles

Crystalline Quartz Polarization Rotators rotate the polarization plane of an incident beam by a fixed angle, regardless of the rotator's alignment relative to the beam's polarization. Polarization rotators are a good alternative to waveplates with regards to rotating polarization by a specific angle. They produce a rotation in polarization caused by the optical activity naturally present in quartz crystals being independent of the rotator's orientation around the optical axis. The Crystalline Quartz Polarization Rotators only need to be aligned perpendicular to the direction of propagation of light. Rotators with fixed 45° or 90° rotation at Nd:YAG wavelengths, mounted in a black anodized aluminum mount, are available.
