Product Details

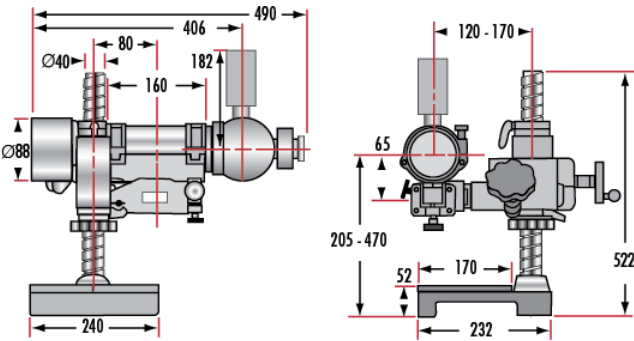

- Complete Video Packages Available
- Darkfield View
- 0.5 Arcsec Resolution
- Fully Adjustable Mount

Autocollimators are a powerful laboratory tool for any optical or precision imaging systems. The autocollimator can be used in a variety of configurations to ensure that there is no angular error in a system. For example, sensors can be aligned with optics, targets, optical mounts or other components in a system. The autocollimator can also be used for measuring the angular accuracy of moving parts such as stages. They are often used to measure the angles within a single optic such as prisms.

This darkfield autocollimator makes it possible to see reflections from very low-reflective plane surfaces, such as camera sensors, at a far distance. This high precision autocollimator has a 70mm aperture, which provides bright and clear reflected images. It also includes a double line reticle for easy and accurate detection. For comfortable viewing, the viewer can also be rotated.

An optically flat reference mirror is available for aligning non-reflective surfaces. A C-Mount camera adapter can replace the eyepiece and allow the view field image to be displayed on a monitor or saved to a computer. The digital package is available to provide a complete “out-of-the-box” video system with USB output. This package includes the LED autocollimator, stand and cover, camera, C-Mount camera adapter, and a USB output cable.

Technical Information

#87-306: Digital System	
Autocollimator Main Body	#87-227
Adjustable Stand and Cover	#59-396
C-mount Camera Adapter	#59-398
USB Monochrome Camera	#16-507
3m USB Cable	#37-342

#19-723: Digital System	
Autocollimator Main Body	#87-227
Adjustable Stand and Cover	#59-396
C-mount Camera Adapter	#59-398
GigE Monochrome Camera	#16-465
5m USB Cable	#63-863
